

WHAT IS CLAIMED IS:

1. A furniture construction for housing at least one electronic component, comprising:
 - a housing defining an interior that is at least partially enclosed; and
 - 5 a support assembly for supporting the at least one electronic component in a first position that is generally horizontal and in a second position that is at a downwardly inclined angle at least partially within the interior of said housing.
2. A furniture construction according to Claim 1, wherein said support assembly comprises a drawer.
- 10 3. A furniture construction according to Claim 1, wherein said support assembly comprises at least one roller.
4. A furniture construction according to Claim 1, wherein said support assembly comprises first and second guide tracks and first and second pins, said first pin being structured for sliding engagement with said first guide track and said second pin being 15 structured for sliding engagement with said second guide track.
5. A furniture construction according to Claim 1, wherein said support assembly comprises a pair of slides.
6. A furniture construction according to Claim 5, wherein each of said slides comprises an arcuate slot and pin being structured for sliding engagement with said slot.
- 20 7. A furniture construction according to Claim 1, wherein said support assembly comprises at least one resilient member structured to assist in the movement of said support assembly between said first and second positions.
8. A furniture construction according to Claim 1, wherein said support assembly 25 further comprises a piston-cylinder assembly structured to assist in the movement of said support assembly between said first and second positions.

9. A furniture construction according to Claim 1, wherein said support assembly includes a motor structured to move said support assembly between said first and second positions.

10. A furniture construction according to Claim 1, wherein said support assembly includes a pair of brackets structured to support at least a portion of said support assembly.

11. A furniture construction for housing at least one electronic component and a plurality of media packages, comprising:

a housing defining an interior that is at least partially enclosed;

at least one support assembly for supporting the at least one electronic component in a first position that is generally horizontal and in a second position that is at a downwardly inclined angle at least partially within the interior of said housing; and

at least one storage compartment structured to receive the plurality of media packages and store the plurality of media packages within the interior of said housing.

12. A furniture construction according to Claim 11, wherein said support assembly comprises a drawer.

13. A furniture construction according to Claim 11, wherein said support assembly comprises at least one roller.

14. A furniture construction according to Claim 11, wherein said support assembly comprises first and second guide tracks and first and second pins, said first pin being structured for sliding engagement with said first guide track and said second pin being structured for sliding engagement with said second guide track.

15. A furniture construction according to Claim 11, wherein said support assembly comprises a pair of slides.

16. A furniture construction according to Claim 15, wherein each of said slides comprises an arcuate slot and pin being structured for sliding engagement with said slot.

17. A furniture construction according to Claim 11, wherein said support assembly comprises at least one resilient member structured to assist in the movement of said support assembly between said first and second positions.

18. A furniture construction according to Claim 11, wherein said support assembly further comprises a piston-cylinder assembly structured to assist in the movement of said support assembly between said first and second positions.

19. A furniture construction according to Claim 11, wherein said support assembly includes a motor structured to move said support assembly between said first and second positions.

20. A furniture construction according to Claim 11, wherein said support assembly includes a pair of brackets structured to support said support assembly.

21. A support assembly for use with a support structure for supporting at least one electronic component, comprising:

15 a moveable support for supporting the at least one electronic component; and supporting apparatus structured to be attached to the support structure and structured to support the moveable support in a first position that is generally horizontal and in a second position that is at a downwardly inclined angle.

22. A support assembly according to Claim 21 wherein said supporting apparatus comprises at least one roller.

20 23. A support assembly according to Claim 21, wherein said supporting apparatus comprises a shelf.

24. A support assembly according to Claim 21, wherein said supporting apparatus comprises first and second guide tracks and first and second pins, said first pin being structured for sliding engagement with said first guide track and said second pin being structured for sliding engagement with said second guide track.

25. A support assembly according to Claim 21, wherein said supporting apparatus comprises a pair of slides.

26. A support assembly according to Claim 21, wherein said supporting apparatus comprises an arcuate slot and pin being structured for sliding engagement with said slot.

5 27. A support assembly according to Claim 21, wherein said supporting apparatus comprises at least one resilient member structured to assist in the movement of said moveable support between said first and second positions.

10 28. A support assembly according to Claim 21, wherein said supporting apparatus further comprises a piston-cylinder assembly structured to assist in the movement of said moveable support between said first and second positions.

29. A support assembly according to Claim 21, wherein said supporting apparatus comprises a motor structured to move said moveable support between said first and second positions.

15 30. A support assembly according to Claim 21, wherein said supporting apparatus includes a pair of brackets structured to support said supporting apparatus.

31. A method of making a furniture construction for supporting at least one electronic component, comprising:

constructing a housing defining an interior; and

20 mounting at least one support assembly within the interior of the housing, the support assembly being structured to support the at least one electronic component in a first position that is generally horizontal and in a second position that is at a downwardly inclined angle at least partially within the interior of the housing.

25 32. A method according to Claim 31, further comprising installing a piston-cylinder assembly to assist in moving the support assembly between the first and second positions.

33. A method according to Claim 31, further comprising installing a motor structured to move the support assembly between the first and second positions.

34. A method according to Claim 31, further comprising providing a media packaging support compartment within the interior of the housing.
